Chapter 1

Todo List

Member [cReport.cReport.write_report](#)

Implement write_report to file

Member [vagueplaces.gen_heatmap](#)

gen_heatmap is not implemented

Chapter 2

Namespace Index

2.1 Packages

Here are the packages with brief descriptions (if available):

cPlace	9
cReport	9
cSpinner	9
geom_functions	9
vagueplaces	10

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

cPlace::cPlace	Class containing information of a place	17
cReport.cReport	Report printing class	18
cSpinner.cSpinner	Print information in the same line, giving feedback to the user	21

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

cPlace.py	30
cReport.py	31
cSpinner.py	31
geom_functions.py	31
vagueplaces.py	32
alpha_shape/main.cpp	25

Chapter 5

Namespace Documentation

5.1 cPlace Namespace Reference

Classes

- class `cPlace`
Class containing information of a place.

5.2 cReport Namespace Reference

Classes

- class `cReport`
Report printing class.

5.3 cSpinner Namespace Reference

Classes

- class `cSpinner`
Print information in the same line, giving feedback to the user.

5.4 geom_functions Namespace Reference

Functions

- def `convex_hull`

Generates the convex hull of a latlon list of tuples [(lat0,lon0),(lat1,lon1),... (latN,lonN)].

- def [alpha_shape](#)

External system execution of alpha_shaper to generate a WKT alpha shape file.

5.4.1 Function Documentation

5.4.1.1 def geom_functions.alpha_shape (cgalfile, alpha)

External system execution of alpha_shaper to generate a WKT alpha shape file.

Expects a CGAL file with lon lat corrdinates and the first line an integer of the total number of lines to read

Definition at line 19 of file geom_functions.py.

5.4.1.2 def geom_functions.convex_hull (latlon_list)

Generates the convex hull of a latlon list of tuples [(lat0,lon0),(lat1,lon1),... (latN,lonN)].

Definition at line 10 of file geom_functions.py.

5.5 vagueplaces Namespace Reference

Functions

- def [european_countries](#)

Retrieve an europe country list from DBpedia with URIs.

- def [get_points](#)

Retrieve a list of points from DBpedia matching the input.

- def [gen_heatmap](#)

- def [gen_convex_hull](#)

Generate the convex hull for the report.

- def [gen_alpha_shape](#)

External system execution of alpha_shaper to generate a WKT alpha shape file.

- def [finish_program](#)

- def [write_file_cgal](#)

Writes a file to be read by cgal alpha_shape generator.

- def [write_file_csv](#)

Writes a CSV file to be opened by a GIS software.

- def [write_file](#)

Write a file (fileh) with the format (wf).

- def [kill_handler](#)

Variables

- tuple `parser` = `argparse.ArgumentParser`(description='CSV generation with name;point;country querying dbpedia')
- string `help` = 'List of keywords to filter from the Abstract results. Interpreted as Logical disjunction'
- string `dest` = 'live_bool'
- tuple `arguments` = `parser.parse_args()`
- `query_list` = `arguments.stringval`
- `OF` = `arguments.CSV_POINT_OUTPUT`
- `alpha` = `arguments.floatval`
- `isdebug` = `arguments.debug_bool`
- `islive` = `arguments.live_bool`
- int `RESULTS_QUERY` = 500000
- list `PLACES` = []
- tuple `sparql` = `SPARQLWrapper`("http://dbpedia-live.openlinksw.com/sparql")
- tuple `S` = `cSpinner.cSpinner()`
- tuple `REPORT` = `cReport.cReport()`
- list `country_uri` = `country["place"]`
- tuple `country_name` = `country_uri.rpartition('/')`
- int `total_results` = 0
- int `offset` = 0
- int `query_results` = 1
- tuple `country_results` = `get_points(country_uri,query_list,offset,RESULTS_QUERY)`
- list `title` = `result["title"]`
- list `lat` = `result["geolat"]`
- list `lon` = `result["geolong"]`
- `country` = `country_name`
- string `abstract` = ""
- tuple `tmpfile` = `tempfile.NamedTemporaryFile`(prefix='vagueplace',delete=False)

5.5.1 Function Documentation

5.5.1.1 `def vagueplaces.european_countries ()`

Retrieve an europe country list from DBpedia with URIs.

Returns

List with country URIS

Definition at line 86 of file `vagueplaces.py`.

5.5.1.2 `def vagueplaces.finish_program ()`

Definition at line 170 of file `vagueplaces.py`.

5.5.1.3 `def vagueplaces.gen_alpha_shape (cgalfile, alpha)`

External system execution of alpha_shaper to generate a WKT alpha shape file.

Expects a CGAL file with lon lat corrdinates and the first line an integer of the total number of lines to read

Definition at line 165 of file vagueplaces.py.

5.5.1.4 `def vagueplaces.gen_convex_hull ()`

Generate the convex hull for the report.

Definition at line 151 of file vagueplaces.py.

5.5.1.5 `def vagueplaces.gen_heatmap ()`

Todo gen_heatmap is not implemented

Definition at line 144 of file vagueplaces.py.

5.5.1.6 `def vagueplaces.get_points (country_uri, query_list, offset, limit)`

Retrieve a list of points from DBpedia matching the input.

Parameters

<i>country_uri</i>	country to query
<i>query</i>	substring to check in the Abstract
<i>offset</i>	Offset to start retrieving
<i>limit</i>	Limit of lines to retrieve

Returns

List with points with title,geolat,geolong

Definition at line 113 of file vagueplaces.py.

5.5.1.7 `def vagueplaces.kill_handler (signal, frame)`

Definition at line 212 of file vagueplaces.py.

5.5.1.8 `def vagueplaces.write_file (fileh, wf)`

Write a file (fileh) with the format (wf).

Accepting csv and cgal

Definition at line 199 of file vagueplaces.py.

5.5.1.9 `def vagueplaces.write_file_cgal (fileh)`

Writes a file to be read by cgal alpha_shape generator.

Definition at line 179 of file vagueplaces.py.

5.5.1.10 `def vagueplaces.write_file_csv (fileh)`

Writes a CSV file to be opened by a GIS software.

WKT

Definition at line 188 of file vagueplaces.py.

5.5.2 Variable Documentation

5.5.2.1 `string vagueplaces::abstract = ""`

Definition at line 242 of file vagueplaces.py.

5.5.2.2 `vagueplaces::alpha = arguments.floatval`

Definition at line 53 of file vagueplaces.py.

5.5.2.3 `tuple vagueplaces::arguments = parser.parse_args()`

Definition at line 43 of file vagueplaces.py.

5.5.2.4 `vagueplaces::country = country_name`

Definition at line 240 of file vagueplaces.py.

5.5.2.5 `tuple vagueplaces::country_name = country_uri.rpartition('/')`

Definition at line 225 of file vagueplaces.py.

5.5.2.6 `tuple vagueplaces::country_results = get_points(country_uri,query_list,offset,RESULTS_QUERY)`

Definition at line 234 of file vagueplaces.py.

5.5.2.7 `list vagueplaces::country_uri = country["place"]`

Definition at line 224 of file vagueplaces.py.

5.5.2.8 `string vagueplaces::dest = 'live_bool'`

Definition at line 36 of file `vagueplaces.py`.

5.5.2.9 `string vagueplaces::help = 'List of keywords to filter from the Abstract results.
Interpreted as Logical disjunction'`

Definition at line 28 of file `vagueplaces.py`.

5.5.2.10 `vagueplaces::isdebug = arguments.debug_bool`

Definition at line 54 of file `vagueplaces.py`.

5.5.2.11 `vagueplaces::islive = arguments.live_bool`

Definition at line 55 of file `vagueplaces.py`.

5.5.2.12 `list vagueplaces::lat = result["geolat"]`

Definition at line 238 of file `vagueplaces.py`.

5.5.2.13 `list vagueplaces::lon = result["geolong"]`

Definition at line 239 of file `vagueplaces.py`.

5.5.2.14 `vagueplaces::OF = arguments.CSV_POINT_OUTPUT`

Definition at line 52 of file `vagueplaces.py`.

5.5.2.15 `vagueplaces::offset = 0`

Definition at line 227 of file `vagueplaces.py`.

5.5.2.16 `tuple vagueplaces::parser = argparse.ArgumentParser(description='CSV generation
with name;point;country querying dbpedia')`

Definition at line 25 of file `vagueplaces.py`.

5.5.2.17 `list vagueplaces::PLACES = []`

Definition at line 57 of file `vagueplaces.py`.

5.5.2.18 `vagueplaces::query_list = arguments.stringval`

Definition at line 51 of file vagueplaces.py.

5.5.2.19 `tuple vagueplaces::query_results = 1`

Definition at line 228 of file vagueplaces.py.

5.5.2.20 `tuple vagueplaces::REPORT = cReport.cReport()`

Definition at line 72 of file vagueplaces.py.

5.5.2.21 `int vagueplaces::RESULTS_QUERY = 500000`

Definition at line 56 of file vagueplaces.py.

5.5.2.22 `tuple vagueplaces::S = cSpinner.cSpinner()`

Definition at line 67 of file vagueplaces.py.

5.5.2.23 `tuple vagueplaces::sparql = SPARQLWrapper("http://dbpedia-live.openlinksw.-
com/sparql")`

Definition at line 62 of file vagueplaces.py.

5.5.2.24 `list vagueplaces::title = result["title"]`

Definition at line 237 of file vagueplaces.py.

5.5.2.25 `tuple vagueplaces::tmpfile = tempfile.NamedTemporary-
File(prefix='vagueplace',delete=False)`

Definition at line 266 of file vagueplaces.py.

5.5.2.26 `int vagueplaces::total_results = 0`

Definition at line 226 of file vagueplaces.py.

Chapter 6

Class Documentation

6.1 cPlace::cPlace Class Reference

Class containing information of a place.

Public Member Functions

- `def __init__`
Class constructor.

Public Attributes

- `name`
- `lat`
- `lon`
- `text`
- `country`

6.1.1 Detailed Description

Class containing information of a place.

Entity simply used as a container of information.

Definition at line 6 of file cPlace.py.

6.1.2 Constructor & Destructor Documentation

6.1.2.1 `def cPlace::cPlace::__init__(self, name, lat, lon, abstract, country)`

Class constructor.

Parameters

<i>name</i>	
<i>lat</i>	
<i>lon</i>	
<i>abstract</i>	
<i>country</i>	

Definition at line 17 of file cPlace.py.

6.1.3 Member Data Documentation

6.1.3.1 cPlace::cPlace::country

Definition at line 17 of file cPlace.py.

6.1.3.2 cPlace::cPlace::lat

Definition at line 17 of file cPlace.py.

6.1.3.3 cPlace::cPlace::lon

Definition at line 17 of file cPlace.py.

6.1.3.4 cPlace::cPlace::name

Definition at line 17 of file cPlace.py.

6.1.3.5 cPlace::cPlace::text

Definition at line 17 of file cPlace.py.

The documentation for this class was generated from the following file:

- [cPlace.py](#)

6.2 cReport.cReport Class Reference

Report printing class.

Public Member Functions

- def [set_country_count](#)

For a set of places, counts the places in each country.

- def [print_report](#)
Prints the report to the standart output.
- def [write_report](#)
- def [set_alphas](#)
Sets the report alpha values.
- def [set_wkt_ashape](#)
sets the WKT for the alpha shape
- def [set_wkt_chull](#)
sets the WKT for the convex hull
- def [set_query](#)
- def [set_points_filename](#)
Sets the path to the points file.
- def [set_live](#)
sets if DBpedia live is the used DBpedia version

6.2.1 Detailed Description

Report printing class.

Class to record information about the execution and finally print it.

Definition at line 8 of file cReport.py.

6.2.2 Member Function Documentation

6.2.2.1 def cReport.cReport.print_report (self)

Prints the report to the standart output.

Definition at line 39 of file cReport.py.

6.2.2.2 def cReport.cReport.set_alphas (self, alpha, optalpha)

Sets the report alpha values.

Parameters

<i>alpha</i>	used alpha
<i>optalpha</i>	Optimal alpha

Definition at line 99 of file cReport.py.

6.2.2.3 def cReport.cReport.set_country_count (self, places)

For a set of places, counts the places in each country.

Definition at line 25 of file cReport.py.

6.2.2.4 `def cReport.cReport.set_live (self, live)`

sets if DBpedia live is the used DBpedia version

Parameters

<i>live</i>	Boolean
-------------	---------

Definition at line 133 of file cReport.py.

6.2.2.5 `def cReport.cReport.set_points_filename (self, ofile)`

Sets the path to the points file.

Parameters

<i>ofile</i>	String path
--------------	-------------

Definition at line 125 of file cReport.py.

6.2.2.6 `def cReport.cReport.set_query (self, query)`

Definition at line 117 of file cReport.py.

6.2.2.7 `def cReport.cReport.set_wkt_ashape (self, wkt)`

sets the WKT for the alpha shape

Definition at line 107 of file cReport.py.

6.2.2.8 `def cReport.cReport.set_wkt_chull (self, wkt)`

sets the WKT for the convex hull

Definition at line 114 of file cReport.py.

6.2.2.9 `def cReport.cReport.write_report (self, fileh)`

Todo Implement write_report to file

Definition at line 90 of file cReport.py.

The documentation for this class was generated from the following file:

- [cReport.py](#)

6.3 cSpinner.cSpinner Class Reference

Print information in the same line, giving feedback to the user.

Public Member Functions

- def `run`
Start the thread.
- def `set_msg`
Set the extra message to print.
- def `stop`
Stop the print thread.
- def `pause`
Pause the print thread.
- def `unpause`
continue the print thread.

Public Attributes

- `msg`

Static Public Attributes

- list `chars` = ["\\", "|", "/", "-"]
- int `index` = 0
- `keeprunning` = True
- `paused` = False;
- string `msg` = ""

6.3.1 Detailed Description

Print information in the same line, giving feedback to the user.

Prints a spinning text on the screen. Additional text may be attached as extra information. Extends the Thread class

Definition at line 10 of file cSpinner.py.

6.3.2 Member Function Documentation

6.3.2.1 def cSpinner.cSpinner.pause (self)

Pause the print thread.

Definition at line 55 of file cSpinner.py.

6.3.3.5 cSpinner.cSpinner::msg

Definition at line 33 of file cSpinner.py.

6.3.3.6 cSpinner.cSpinner::paused = False; [static]

Definition at line 14 of file cSpinner.py.

The documentation for this class was generated from the following file:

- [cSpinner.py](#)

Chapter 7

File Documentation

7.1 alpha_shape/main.cpp File Reference

```

7.1.1 Typedef Documentation

7.1.1.1 typedef [Alpha_shape_2::Alpha_iterator](#) [Alpha_iterator](#)

Definition at line 55 of file main.cpp.

7.1.1.2 typedef [CGAL::Alpha_shape_2<Triangulation_2>](#) [Alpha_shape_2](#)

Definition at line 37 of file main.cpp.

7.1.1.3 typedef [Alpha_shape_2::Alpha_shape_edges_iterator](#) [Alpha_shape_edges_iterator](#)

Definition at line 56 of file main.cpp.

**7.1.1.4 `typedef Alpha_shape_2::Alpha_shape_vertices_iterator
Alpha_shape_vertices_iterator`**

Definition at line 57 of file `main.cpp`.

7.1.1.5 `typedef Alpha_shape_2::Edge Edge`

Definition at line 41 of file `main.cpp`.

7.1.1.6 `typedef Alpha_shape_2::Edge_circulator Edge_circulator`

Definition at line 53 of file `main.cpp`.

7.1.1.7 `typedef Alpha_shape_2::Edge_iterator Edge_iterator`

Definition at line 52 of file `main.cpp`.

7.1.1.8 `typedef Alpha_shape_2::Face Face`

Definition at line 39 of file `main.cpp`.

7.1.1.9 `typedef Alpha_shape_2::Face_circulator Face_circulator`

Definition at line 45 of file `main.cpp`.

7.1.1.10 `typedef Alpha_shape_2::Face_handle Face_handle`

Definition at line 42 of file `main.cpp`.

7.1.1.11 `typedef Alpha_shape_2::Face_iterator Face_iterator`

Definition at line 50 of file `main.cpp`.

7.1.1.12 `typedef CGAL::Alpha_shape_face_base_2<K> Fb`

Definition at line 33 of file `main.cpp`.

7.1.1.13 `typedef K::FT FT`

Definition at line 26 of file `main.cpp`.

7.1.1.14 typedef CGAL::Exact_predicates_exact_constructions_kernel K

Definition at line 24 of file main.cpp.

7.1.1.15 typedef Alpha_shape_2::Locate_type Locate_type

Definition at line 48 of file main.cpp.

7.1.1.16 typedef K::Point_2 Point

Definition at line 28 of file main.cpp.

7.1.1.17 typedef CGAL::Polygon_2<K> Polygon_2

Definition at line 30 of file main.cpp.

7.1.1.18 typedef K::Segment_2 Segment

Definition at line 29 of file main.cpp.

7.1.1.19 typedef CGAL::Triangulation_data_structure_2<Vb,Fb> Tds

Definition at line 34 of file main.cpp.

7.1.1.20 typedef CGAL::Delaunay_triangulation_2<K,Tds> Triangulation_2

Definition at line 35 of file main.cpp.

7.1.1.21 typedef CGAL::Alpha_shape_vertex_base_2<K> Vb

Definition at line 32 of file main.cpp.

7.1.1.22 typedef Alpha_shape_2::Vertex Vertex

Definition at line 40 of file main.cpp.

7.1.1.23 typedef Alpha_shape_2::Vertex_circulator Vertex_circulator

Definition at line 46 of file main.cpp.

7.1.1.24 `typedef Alpha_shape_2::Vertex_handle Vertex_handle`

Definition at line 43 of file main.cpp.

7.1.1.25 `typedef Alpha_shape_2::Vertex_iterator Vertex_iterator`

Definition at line 51 of file main.cpp.

7.1.2 Function Documentation

7.1.2.1 `template<class OutputIterator > void alpha_edges (const Alpha_shape_2 & A, OutputIterator out)`

Definition at line 63 of file main.cpp.

7.1.2.2 `template<class OutputIterator > void alpha_vertices (const Alpha_shape_2 & A, OutputIterator out)`

Definition at line 76 of file main.cpp.

7.1.2.3 `bool check_inside (Point pt, Polygon_2 pgn, K traits)`

Definition at line 108 of file main.cpp.

7.1.2.4 `template<class OutputIterator > bool file_input (OutputIterator out, char * filename)`

Definition at line 89 of file main.cpp.

7.1.2.5 `bool is_inside (Polygon_2 plg1, Polygon_2 plg2)`

Checks if plg2 is inside plg1

Definition at line 127 of file main.cpp.

7.1.2.6 `int main (int argc, char * argv[])`

Definition at line 305 of file main.cpp.

7.1.2.7 `void print_help ()`

Definition at line 225 of file main.cpp.

7.1.2.8 void print_WKT_polygon_2 (Polygon_2 plg)

Prints a polygon in its WKT form (p1,p2,p3,...)

Note

Does not add POLYGON text. It is used inside other printing functions

Definition at line 145 of file main.cpp.

7.1.2.9 void segments_to_polygons (std::vector< Segment > segments, std::vector< Polygon_2 > &polygons)

Generates a vector of polygons from a vector of segments.

First separates the segments in different adjacent groups (that would be the polygons). Then generates a polygon from each of the lists

Parameters

<i>segments</i>	an std::vector<Segment> with CGAL segment_2
<i>&polygons</i>	INOUT A std::vector<Polygon_2> with CGAL Polygon_2

Definition at line 166 of file main.cpp.

7.1.2.10 void toWKT_polygons (std::vector< Polygon_2 > polygons)

Prints a WKT version of the polygons to stdout

NOTE: if a polygon is inside another polygon is treated as a hole

Definition at line 242 of file main.cpp.

7.1.2.11 void toWKT_segments (std::vector< Segment > segments)

Prints a csv list of the Alpha shape segments

Definition at line 280 of file main.cpp.

7.1.2.12 void toWKT_vertices (std::vector< Vertex_handle > segments)

Definition at line 292 of file main.cpp.

7.2 cPlace.py File Reference

Classes

- class [cPlace::cPlace](#)
Class containing information of a place.

Packages

- namespace [cPlace](#)

7.3 cReport.py File Reference

Classes

- class [cReport.cReport](#)
Report printing class.

Packages

- namespace [cReport](#)

7.4 cSpinner.py File Reference

Classes

- class [cSpinner.cSpinner](#)
Print information in the same line, giving feedback to the user.

Packages

- namespace [cSpinner](#)

7.5 geom_functions.py File Reference

Packages

- namespace [geom_functions](#)

Functions

- def [geom_functions.convex_hull](#)
Generates the convex hull of a latlon list of tuples [(lat0,lon0),(lat1,lon1),... (latN,lonN)].
- def [geom_functions.alpha_shape](#)
External system execution of alpha_shaper to generate a WKT alpha shape file.

7.6 vagueplaces.py File Reference

Packages

- namespace [vagueplaces](#)

Functions

- def [vagueplaces.european_countries](#)
Retrieve an europe country list from DBpedia with URIs.
- def [vagueplaces.get_points](#)
Retrieve a list of points from DBpedia matching the input.
- def [vagueplaces.gen_heatmap](#)
- def [vagueplaces.gen_convex_hull](#)
Generate the convex hull for the report.
- def [vagueplaces.gen_alpha_shape](#)
External system execution of alpha_shaper to generate a WKT alpha shape file.
- def [vagueplaces.finish_program](#)
- def [vagueplaces.write_file_cgal](#)
Writes a file to be read by cgal alpha_shape generator.
- def [vagueplaces.write_file_csv](#)
Writes a CSV file to be opened by a GIS software.
- def [vagueplaces.write_file](#)
Write a file (fileh) with the format (wf).
- def [vagueplaces.kill_handler](#)

Variables
